Air Dryer (JC15A)

ZAR 1.00

Dry, clean compressed air is not a luxury in today's bodyshops, it is, in fact, a necessity. Bodyshop operators are spending more time and money than ever before trying to increase their facility's efficiency and productivity. But many bodyshop operators do not realise that by simply removing moisture from their compressed air system, costly redoing of jobs can be greatly reduced. In addition, clean, dry air enables pneumatic tools and spraying equipment to operate properly, preventing corrosion of internal parts that result in malfunctions and downtimes, and improving the quality of the finished paint job. The end result is improved efficiency and productivity, better quality, and increased profitability.

Technical Dimensions:

Volume : 1900 L/min

CFM : 67.10

Voltage : 220V

480mm(L) x 375mm(W) x 800mm(H)
