TURBINE EXTRACTION

[Call for Pricing](#)

CHARACTERISTICS:

- * "High vacuum removal system: 3kW (4HP)
- * Base element of RUPES centralized vacuum system with fixed terminals, mobile brackets, service units and connection modues.
- * Professional unit for the removal of dust produced during sanding and industrial processes.
- * Widely used in several industries: body shops, manufacturing plants, joinery works, shipbuilding, building and yards in general.
- * Easy to install and use with modern and accurately studied designed.
- * Three-phase motor/pump assembly mounted in soundproofed compartment.
- * Large filtering surface: 3.0m2 polyester filter, BIA certified, class M.
- * Ultra-efficient manual and automatic cleaning with "Rotor-Jet" system.
- * Designed to be remotely controlled by means of a tool or control panel.
- * Front door to simplify the removal of the dust container.
- * Noise-proof hot air discharge suitable to be fitted with ducts.

TECHNICAL DATA:

Power : 3000 Watt
Depression : 1850mm H2O
Noise : 75 dB (A)
Max. capacity : 400 m3/h
Filter surface : 3m2
Recommended number of workstations : 3/4 nr.
Connection Diameter : 75mm
Dimensions (cm) : 148 x 55 x 63
Power : 4HP
